CONSIDERATIONS BEFORE THE SERVICE

- Have the area clean, deforested, without water and without snow for the service.

- It is suggested to let us know the purpose of the service, so we will do a work focused on your need.
- The location work will be done by types of channeling (water, power, gas, fiber among others.)

- Cables or pipes out of service are not detected; unless the client requests it.
- The presence of the client is suggested at the time of performing the Service, to explain the details of the work to be performed.
- Before the service our team will recognize the area and if it is considered a photographic record prior to the service.

CONSIDERATIONS BEFORE THE SERVICE (continued)

- Radiolocation equipment is equipment that works with RF, so it can interfere with local RF systems. Consider shutting down or suspending the operation of local RF-sensitive systems while the service is being performed. For more information see <https://utilitylocatingservices-ryf.com/2019/04/12/considerations-in-the-detection-with-the-rd7000-localizer/>

- The demarcation of the underground services is carried out with a paint spray of color and quality suitable for this purpose with very low level of toxicity for life. Consider the composition of these to avoid damage to third parties. For more information see <https://utilitylocatingservices-ryf.com/2019/05/17/the-paint-we-use-in-utility-locating-services/>
- Consider the climatic aspects to plan the activity. <https://utilitylocatingservices-ryf.com/2019/04/05/the-weather-challenge-on-radiolocation/>

CONSIDERATIONS BEFORE THE SERVICE (continued)

- Consider and notify the possible risks and relevant data when executing the service. <https://utilitylocatingservices-ryf.com/2019/04/04/analysis-of-risk-at-work/>
- All waste derived from the service is our responsibility.
- Once the service is completed, we will deliver a Digital Photographic Registers (available for 5 days).
- For details of these and other considerations visit www.utilitylocatingservices-ryf.com
